4 in 1 SPELT HULLER

The machine performs Four operations at the same time:

1-Hulling the raw material, **2-**aspiration of husks, **3-**separation of hulled and un-hulled seeds in its integrated Density Separator, **4-** Short Seeds Separation within its integrated Screen Separator.

Hulling based on the spinning principle is a reliable and gentle process. The Hulling process is a gentle, proven process after the rubbing seed is against the mesh, and seed is pushed through the mesh opening, and the husk and kernel is separated. Unpeeled grains returned to the intake automatically. Husks are removed by an exhaust line and collected in a Bag or conveyed to a distance. Exhaust fan lined with wear protection; Strong magnet at the raw material intake catches iron parts to avoid damage to the machine.

MODEL	Addams Spelt Huller & Separator
CAPACITY up to	1000 kg/hr. with 65 % yield and with Rehulling 99%
MOTOR kW	0,75 + 11,00 + 1.1 + 1.1 + 4.0 + 0.35 = 18.30 kW
NOISE LEVEL	75-85 dB(A)
Net Weight KG	750
